

Session Chair: Dr. Jon Miller, Air Force Research Laboratory

Last year during the DAF ManTech strategic outreach session, we provided an overview of our investment strategy, to include a program overview, general strategy, future directions and near-term funding opportunities. We have since made a few shifts in our major product areas, which are now as follows:

Hypersonic Strike, Autonomous Collaborative Systems, Networked Command, Control and Communications, Advanced Concepts in support of legacy and future programs of record, and Space Systems.

For this session, we will offer one-on-one opportunities to discuss gaps, trends, and ideas with these product area leads, as well as with our thought leaders in advanced manufacturing technologies areas such as additive manufacturing and robotics, and emerging manufacturing technologies, such as biomanufacturing and quantum.

There will be a sign-up sheet in the DAF ManTech booth with available time slots during the session.
